

Global Energy Transformation Programme

Delivering on international energy and climate goals

GET.pro in a Nutshell

European multi-donor platform

Programme duration: 04/2018–09/2021

The Agenda 2030 and the Paris Climate Agreement triggered a multitude of ambitious political commitments; amongst them the goal to provide access to sustainable, climate-friendly energy for the underserved two billion people worldwide. Getting there requires a coordinated energy transition at the global level that supports the large-scale rollout of sustainable energy services.

The **Global Energy Transformation Programme (GET.pro)**, a European multi-donor platform, delivers on these international energy and climate goals.

It does so by offering focused instruments that

- mobilise private investments in decentralised renewable energy (**GET.invest**), and
- assist public partners to advance their energy transitions (**GET.transform**).

In addition, GET.pro hosts the **Secretariat of the Africa-EU Energy Partnership (AEEP)**.

GET.pro directly contributes to European initiatives. It operates globally with an initial focus on Africa.

THE PLATFORM

As a multi-donor platform, GET.pro is designed to combine funding from various donors for different instruments and initiatives. Funding partners can invest in instruments that help boost their own priorities. The joint platform enables synergies between the different political initiatives and provides a sustained contribution towards a global energy transformation.

GET.pro offers centralised core services to the instruments and initiatives running on its platform, allowing them to focus on implementation.

THE INSTRUMENTS

To achieve the ambitious international energy and climate goals, action needs to take place at two levels—the private and the public sector:

GET.invest mobilises private investments in decentralised renewable energy by supporting market access (market information, matchmaking) and by building a pipeline of bankable investment projects.

Expected Results: 25 renewable energy projects translate into 2.5 million people and 5,000 SMEs with access to sustainable energy, €400m investments and 300,000 t CO₂ avoided per year.

GET.transform offers developing and emerging countries comprehensive advisory services to advance their energy sector transformation.

Expected Results: Attractive political and regulatory frameworks for sustainable energy in partner countries.

As host of the **AEEP Secretariat**, GET.pro promotes strategic dialogue between Africa and Europe on energy.

Expected Results: Improved coherence of European energy initiatives in Africa and effective partnerships for an African energy transition.

HISTORY

GET.pro is the successor of the EU Energy Initiative Partnership Dialogue Facility (EUEI PDF) and builds on its results. As an implementation instrument of the EU Energy Initiative, the EUEI PDF promoted sustainable energy for equitable development in Africa, Asia and Latin America for more than 13 years. Through the Secretariat of the AEEP, the EUEI PDF fostered close cooperation between Africa and Europe. The programme also helped improve the political and regulatory framework for sustainable energy in 55 cases. At present, 42 supported renewable energy projects are under development, with an expected output of 200 MW and an annual emission reduction of 680,000 t CO₂e.
