

Introducing GET.transform

*GET.transform is a technical assistance programme supporting national and regional partners and institutions in advancing their **energy transitions**. The programme is supported by the European Union, Germany, Sweden, the Netherlands and Austria.*

GET.transform in a Nutshell

European multi-donor programme

Beneficiaries: **public sector institutions**

Focus regions: **Africa, Latin America and the Caribbean**

THE CHALLENGE

The world's pathway to net zero foresees the power sector delivering 60 percent of the required energy-related CO₂ emission reductions. At the same time, the gap of more than half a billion people lacking electricity access needs to be closed. Both utility-scale and decentralised renewables in on-grid and off-grid power generation systems are essential to achieving these targets.

Though the need for **energy transitions through power sector transformation** is recognised by most public-sector actors, often the **institutional, regulatory, and technical environment** is **yet to be built** in order to enable broad-based investments into sustainable power supply and distribution.

THE APPROACH

GET.transform focusses on supporting the **power sector as a key enabler** and on regulation as a pre-requisite to conducive conditions for large-scale clean energy deployment.

Operating globally with a focus on **Africa and Latin America and the Caribbean**, the programme uses a systematic approach in advancing power sector transformations with national or regional partners:

- **Advisory services** across **4 key energy transition themes**
- **Scaling-up** and mainstreaming of **country and regional experiences**
- **Cost-efficient implementation** following a standardised thematic and geographic approach

GET.transform is supported by

FAST-TRACKING PROGRESS THROUGH COLLABORATION

Flexibly deployed resources in combination with standing expertise in long-term energy planning, on- and off-grid regulation, and market development as well as renewable energy grid integration enable GET.transform to support public-sector partners rapidly and cost-efficiently. Next to the programme's modular set-up, it is GET.transform's strong focus on collaboration that helps to accelerate progressive change in the

power sectors of partner countries and regions. Tapping into a wide network of bilateral and international initiatives and institutions, GET.transform ensures that its support to energy ministries, regulatory bodies, power utilities and regional organisations is truly additional to existing efforts, and informed by global best practice.

THE RESULTS

	In-depth power system transformation support to 3 energy ministries, 2 national and 1 regional electricity regulator as well as 1 power system operator in 3 countries
	Regional capacity building with 6 electricity regulators, 5 power pools as well as 14 national energy planning departments in the Africa and IAC regions
	New off-grid electricity access frameworks adopted and updated on-grid energy planning and operation practices introduced with system operators and electric utilities
	Including predecessor programme, more than 40 policies and regulatory frameworks were supported
